TECHN GLOBAL

FULL STACK DEVELOPMENT

MINOR PROJECT: Student Registration Portal

Step-by-step guidance (10 points):

- Define functional requirements such as registration, login, and profile management.
- Design database schema for student records.
- Set up backend server and API endpoints.
- Implement user authentication and validation.
- Develop frontend forms and dashboards.
- Integrate frontend with backend APIs.
- Implement CRUD operations for student data.
- Test application for input validation and errors.
- Deploy application on cloud platform.
- Document system architecture and API usage.

Dataset details:

- Dataset name: Student Registration Sample Data
- Dataset source: Synthetic educational data
- Dataset location: GitHub
- Dataset link: https://github.com/typicode/json-server

Tools and platforms:

- Frontend: HTML, CSS, JavaScript, React
- Backend: Node.js, Express
- Database: MongoDB / MySQL
- Authentication: JWT
